Profile

A self-taught Full-Stack Developer with a strong foundation in computer science principles, including advanced Algorithms and Data Structures, scalable software architecture, and modern design patterns. Experienced in building real-world applications through freelance projects and working with development teams, and leading projects through all phases of the software development lifecycle. Skilled in defining software architecture to be future-proof, designing database structures, and optimizing performance to ensure maintainable and scalable solutions. Passionate about continuous learning, solving complex problems, and delivering high-quality systems across both frontend and backend.

Education

Present	University of Computer (Sittwe)
Estimated Graduated 2027	computer science

Professional Experience

Nov 2025 - Present Yangon , Myanmar (Remote)	Software Development Team Leader (Full Time) , WannSaung  Led software development team, conducted code reviews, ensured code quality and documentation across frontend and backend, and promoted knowledge sharing and best practices. Defined project architecture and workflow, created flow diagrams, documented project processes, and implemented project-wide technical guidelines and standards. Assigned tasks, tracked project progress, and coordinated across frontend, backend, and UI/UX teams to ensure timely and high-quality deliverables. Led UI/UX team, provided guidance and feedback, ensuring design consistency and user-friendly interfaces. Managed and deployed full-stack infrastructure using Alibaba Cloud, including server setup, configuration, and performance monitoring. Implemented CI/CD pipelines with GitHub Actions to automate building, testing, and deployment for both frontend and backend applications, improving development efficiency and release reliability.
--	---

April 2025 - Nov 2025 Yangon, Myanmar (Remote)	Fullstack Software Developer (Full Time) , triosys.info  TRIOSYS IT Solutions and Services Company, established in 2019, began by providing IT support to small businesses. Due to its strong focus on customer satisfaction, the company quickly built a positive reputation and subsequently registered officially under DICA. Today, TRIOSYS specializes in delivering innovative IT solutions and business services to a wide range of organizations. By leveraging cutting-edge technologies, the company helps clients streamline their operations, enhance efficiency, and achieve long-term, sustainable growth.
--	---

At TRIOSYS, I was responsible for leading full-cycle software development projects, including front-end development, scalable back-end systems, and system architecture design. My key contributions included:

Frontend Development: Architected high-performance Next.js frontend using server components, dynamic imports, code splitting, and tree shaking, reducing initial loading. Implemented image optimization (WebP/AVIF, responsive, lazy loading) and CDN delivery for faster global performance. Developed Progressive Web App (PWA) with offline support, and push notifications. Optimized data-heavy workflows with virtualized lists, infinite scrolling, and debounced search. Built secure authentication system (JWT, refresh tokens, RBAC) and enforced frontend security via Zod validation, CSP, CSRF protection, and secure HTTP headers.

Streamlined form handling with React Hook Form + Zod, ensuring type-safe validation and minimal re-renders.

Introduced observability and reliability improvements: Sentry monitoring, error boundaries, retry logic, graceful fallback UIs, and performance monitoring using Lighthouse. Built automated testing suites with Jest and Vitest to ensure code quality and prevent regressions. Containerized frontend with Docker, integrated CI/CD pipelines (Jenkins), and applied Husky Git hooks for code quality enforcement.

Backend Development: Optimized database interactions with efficient queries, indexing, connection pooling, and sharding, reducing latency across Golang, Express, NestJS, and Next.js. Implemented caching strategies Redis, and HTTP caching to accelerate API responses and reduce server load. Enhanced API efficiency through pagination, bulk operations, payload minimization, and optimized data serialization. Scaled backend systems via horizontal scaling, load balancing, auto-scaling, and performance-tuned Golang/Node.js services. Enforced rate-limiting, input validation, and security best practices to maintain performance under high traffic.

May 2023 – Feb 2025
Thantwe, Myanmar

Associate Developer, DomiTech

DomiTech is a dynamic IT company specializing in both infrastructure solutions and software development. The company provides end-to-end technology services, including networking, system integration, and custom software applications. With a focus on innovation and efficiency, DomiTech delivers solutions that help businesses optimize operations, enhance digital capabilities, and stay ahead in a rapidly evolving technological landscape.

At DomiTech, I started with end-to-end networking services, managing infrastructure, connectivity, and system integration. Later, I transitioned into software development, contributing to the design and deployment of custom applications. This journey gave me a strong foundation in both IT infrastructure and software engineering, enabling me to deliver complete, end-to-end technology solutions.

Front-End Development: Worked on the development of complex UI components using React.js and TypeScript, focusing on performance, accessibility, and maintainable code architecture. Implemented client-side routing, form validation, and dynamic data fetchig.

Back-End Engineering: Designed and built RESTful APIs using Node.js and Express.js, handling features such as authentication (JWT, OAuth), file uploads, and role-based access control. Ensured API scalability and security.

Team Workflow: Collaborated in Git-based team environments, performed code reviews, and followed best practices in code structure, testing, and documentation.

Database Design & Integration: Modeled and optimized databases using MongoDB and PostgreSQL, wrote complex queries, and implemented data validation and indexing strategies for performance.

Tech Stack: TypeScript, React.js, Next.js, TailwindCSS, Bootstrap, Shadcn UI, MUI, Tanstack Query, Tanstack Table, React Hook Form, Node.js, Nest.js, Prisma, MySQL, PostgreSQL, Zod, Zustand.

Certificates

Web Development Course - MERN (**Code Hub**)

Next.js Mastery Course (**Code Hub**)

Docker Course (**Code Hub**)

Go:The Complete Developer's Guide(Golang) (**Udemy**)
